Instructions for pilot test

Thank you very much for your help on this study. Please read the following instructions carefully before working on the three Trados projects for this pilot test. Each project conveys a different translation modality, which are translation from scratch, translation with MT on demand and full post-editing in the English (United Kingdom) into Spanish (Spain) language combination.

Please bear in mind the following instructions when translating and post-editing:

- Before starting, please make sure the option "Apply automated translation when no TM match is found" is unmarked in Trados. In the upper bar, click on "File" > "Options" > "Editor" > "Automation":

- Do not make pauses when translating or post-editing. Please work in each of the three Trados projects continuously, without interruptions.
- Please make sure you translate every segment. Work in each project as you would normally do.
- A TM is connected to the project at all times. There are no 100% Context Match or Fuzzy segments in these three projects.
- The source texts in Word format are provided as reference.
- The first segments in each project correspond to the title and intro; they are locked, provided only as reference. They must not be unlocked or translated.

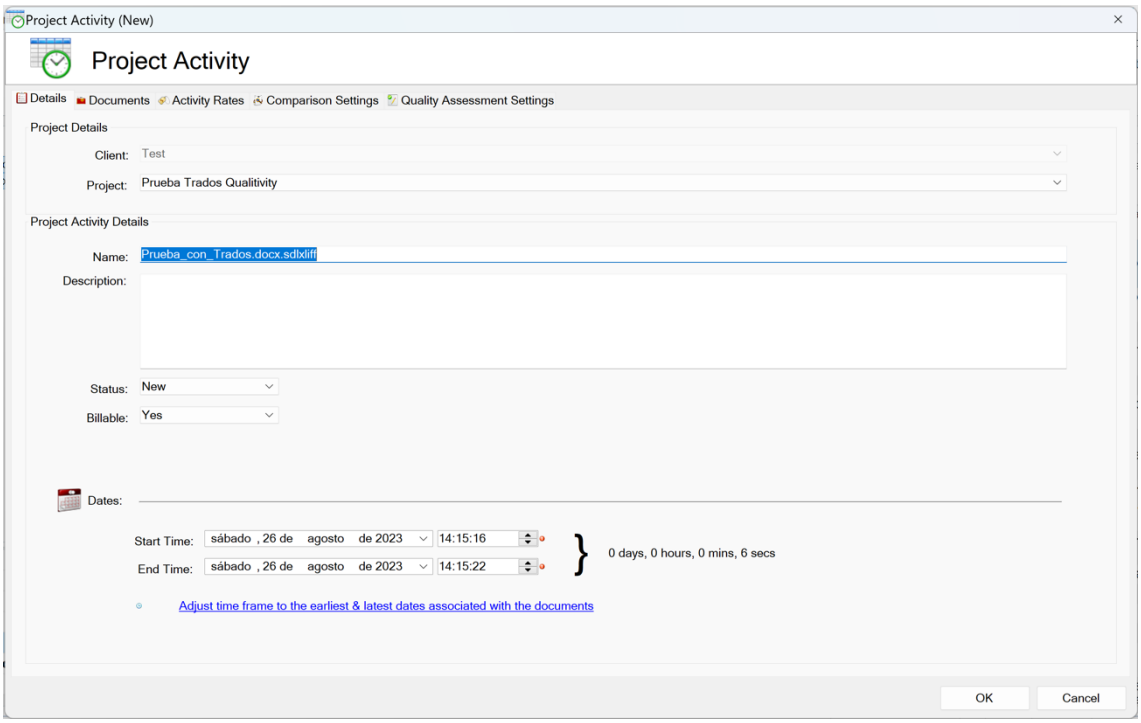

The texts that have been selected for this pilot test are extracts from three pieces of news. The order presented here is not compulsory: you can choose which one you want to do first, second and last. The three projects are as follows:

- Text_A_Flying.docx: this is a translation from scratch project. Please translate normally, without consulting online machine translation websites.
- Text_B_Universe.docx: this is a full post-editing project. The final post-edited text should be considered of publishable quality.

Important: please mark the **"Track Changes" option** in Trados (on the upper bar, "Review" > "Track changes").

- Text_C_Coach.docx: this is a translation with MT on demand project. You can translate normally from scratch, and you have the option to check the MT translation on the added TM to the project and use it in those cases you see fit.

When you finish working on each project in Trados, close the Editor view normally. You will see the following Qualitivity pop-up window:

Important: select the Client as "Test". Please make sure do not click on "Cancel", as the data would not be collected. Click "OK".

When you finish working on the three projects, please click on the Qualitivity plugin, click on the project and export the project activity document in XML format. Please send the XML and the zipped Trados projects to arianalopezp@autonoma.cat afterwards.

Should you have any doubt, please contact Ariana López either via email (arianalopezp@autonoma.cat) or phone number (+34 606353271). Once again, thank you very much for your help!
