This document briefly describes the process for carrying out the translation tasks that are part of Ariana López Pereira's doctoral thesis at the Universitat Autònoma de Barcelona (Measuring human intervention throughout different translation assignments, provisional title). The research aims to study human intervention on different translation tasks carried out by professional translators. This investigation is part of the project Describing Post-Editese (DESPITE-MT, Ref.: PID2019-108650RB-I00, IP: Pilar Sánchez Gijón).

The study consists of translating three translation projects in the combination English (UK variant) to Spanish (Spanish variant) in the RWS Trados software. The three projects are as follows:

1. **Translation without machine-translation**: no machine-translation system is used in this task.
2. **Translation with machine-assisted translation:** the participant can check machine-translated segments in a TM in Trados and apply them whenever they see fit.
3. **Post-editing**: the participant needs to edit as much as necessary so that the resulting translation in Spanish is natural and fluent.

To collect all the data, an informed consent form will be signed beforehand, which guarantees the correct treatment of the information. The source texts to translate are pieces of news, with an approximate length of 1000 words. The duration of each translation task is one hour; they must be carried out one after the other, with as few interruptions as possible. After completing the three tasks, there would be a short 30-minute interview on the translation process. A brief questionnaire will be sent to collect demographic data, as well as the professional experience information.

These three translation projects emulate as closely as possible a real translation assignment, with instructions and a briefing. The data will be collected with Qualitivity, an easy-to-install Trados plugin that collects the keystroke log of the translations only in the Trados environment. Instructions for every translation task and for the plugin installation and deinstallation will be provided. In the case of translation from scratch and translation with machine translation, the projects might not be completed in one hour; it is only necessary to translate normally as far as is possible in that time.

Regarding compensation, the rate is 25 euros per hour, and 4 hours will be invoiced (three hours in total for the tasks, half an hour for the interview and half an hour for additional work for the instructions). The invoice will be processed electronically to the UAB.

In order for the data collection to be valid, the following criteria must be met as a participant:

- Be a native Spanish speaker (Spanish variant).
- Hold a degree or bachelor's degree in Translation and Interpreting or similar.
- Have five years of professional experience working as a professional translator and post-editor (main source of income must be translation and post-editing).
- Work with Trados 2019 or a later version of the Trados software.
